

## AmAir® HT

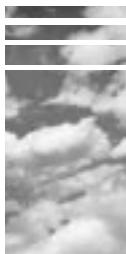

### High Temperature Air Filter

- For use in high temperature applications
- Special high loft glass with a glass fibre backing
- Laminated with a wire mesh grid on the air leaving side.
- Expanded metal faceguard on the air leaving side

AmAir HT filters are designed for use in high temperature applications up to 260°C. The media pack is made of a special high loft glass with a glass fibre backing, laminated with a wire mesh grid on the air leaving side. The media pack is bonded to a sturdy aluminized steel U-channel frame. An expanded metal faceguard on the air leaving side retains the media pack at elevated temperatures. The filter has a gasket on the clean air side. Other executions are available on request.

### Notes

- 1) Width and height dimensions are interchangeable. Filters may be installed with the pleats in the vertical or horizontal position. The pleats are always parallel to the longest cell side unless explicitly specified otherwise.
- 2) Other sizes and air filters in 21 mm (1 inch nominal) depth are available upon request.
- 3) See Technical Data Table for filter depths.
